Research Projects Completed and in Process:

Assessing Interorganizational Relationship Management and Negotiation Processes. This project is an extension of the negotiation research conducted over the past twenty-five years. The intent of this project is to provide the opportunity to integrate instruction of negotiation processes with laboratory research of negotiation applications. Academic classes (both undergraduate and graduate) and executive education courses have been developed to provide negotiation instruction in all academic and industry environments. As part of those environments, a simulated case negotiation scenario has been developed to allow for applied instruction of the concepts and an opportunity to conduct laboratory research of negotiation processes in a longitudinal setting. In addition, this environment offers the potential for group control conditions in experimental settings.

Assessing the Role of Collaboration Between Suppliers and Customers in the Material Handling Industry. This research is designed to assess differences between good, average, and poor relationships between suppliers and customers in the material handling industry. The intent of the research output would be to assist material handling industry companies understand the nature of their supplier – customer relationships using empirically established definitions. Using these definitions, linkages would be to established exchange negotiation behaviors which can enhance the efficiency of the value system. Insights will help member companies develop strategies of how to share information with their suppliers and customers (Currently in Process).
